Advisory

Advisory: Figure Drift diagram notes.

Architecture sketches were being described from captions alone.

Findings: Figure Drift treats a caption as a claim about the drawing only when the caption names the same components as the nearby text.

Uncaptioned boxes were left as unresolved rather than assigned a guessed function.

Recommended posture: Describe drawings only from captions and body text that agree, and mark everything else unresolved..

Assessment

Assessment method: A reviewer checked 30 diagram descriptions for invented components before and after the agreement rule.

Observed outcome: Invented components fell from 12 descriptions to 2 descriptions out of 30.

Boundaries: The rule does not read pixels, so a diagram with no nearby text remains opaque.

Unresolved items: Which vision encoder is worth the latency if it is only applied to pages that contain drawings? Exposure: Severity high: Guessing the role of an unlabeled box can invent an architecture the paper never proposed.

Recommended action: Refuse to name a component that is absent from both the caption and the body text..
